

Center

The Div

Center the Div horizontally

Create a div in html and apply the styles

```
.centered-div {  
  margin: 0 auto;  
  text-align: center;  
}
```

margin: 0 auto; It sets the left and right margins to "auto," causing the element to be centered within its parent container horizontally.

Center the Div horizontally and vertically

```
.parent-container {  
  display: flex;  
  justify-content: center; /* Center horizontally */  
  align-items: center; /* Center vertically */  
  height: 100vh; /* Optional: Make the container take the full viewport h  
}
```

display: flex; activates Flexbox for the parent container.

justify-content: center; centers the content horizontally within the parent container.

align-items: center; centers the content vertically within the parent container.
